

## Fusion Hybrid Coating – Care and Maintenance Guide

14X WEAR  
RESISTANCE

SUPERIOR  
PROTECTION

ECO FRIENDLY  
SOLVENT FREE

UNIQUE BLEND  
OF OIL-WAX &  
LACQUER

The innovative Fusion Hybrid finish on your beautiful Atkinson & Kirby hardwood floor is a result of years of research and development to ensure low-maintenance and peace of mind that the product's hard-wearing finish will continue to perform for years to come.

Despite its low-maintenance finish, your Fusion Hybrid will benefit from the right care & maintenance, so we have everything you need, from routine cleaner, intensive cleaner & master care kits supplied by WOCA.

WOCA wood care solutions are manufactured to be environmentally friendly.

It is recommended that *WOCA: Clean and Care Kit for Lacquered Wood* is used for Hybrid Fusion finished floors.

***Care MUST be taken when using any maintenance products on a natural hardwood floor. Therefore, we recommend that before general use, the product is tested on a discreet area and left 24 hours to dry before satisfactory inspection and proceeding with general care and maintenance procedures.***

Maintaining engineered wood flooring involves a mix of regular care and occasional deeper cleaning.

Here's a comprehensive guide:

### **Daily/Regular Care:**

- **Sweeping/Vacuuming:** Use a soft-bristle broom or vacuum with a soft brush attachment to remove dust, dirt, and debris regularly. Avoid vacuums with beater bars as they might scratch the floor.
- **Mopping:** Damp-mop the floor with a well-wrung mop or a microfiber cloth slightly dampened with a recommended wood floor cleaner. Avoid excess water on the floor. We do not recommend steam cleaners/mops.
- **Avoid Excess Moisture:** Engineered wood is more resistant to moisture than solid wood, but it's still susceptible. Clean spills immediately and avoid leaving wet items on the floor.
- **Protect from Scratches:** Use felt pads or coasters under furniture legs to prevent scratching when moving or shifting items. Trim pets' nails regularly.

### **Periodic Maintenance:**

- **Deep Cleaning:** Periodically, use a dedicated wood floor cleaner recommended by the manufacturer. Avoid oil-based, wax, or ammonia-based cleaners as they can damage the floor.
- **Avoid Harsh Chemicals:** When using cleaning products, make sure they're specifically designed for engineered wood floors. Test in an inconspicuous area first.
- **Refinishing:** Some engineered wood floors come with a thick wear layer that can be refinished. Consult the manufacturer's guidelines to know if your flooring can be refinished and how to do it.
- **Protect from Sunlight:** Direct sunlight can fade the color of the floor. Use blinds or curtains to minimize prolonged exposure.

## **Tips:**

### Area Rugs and Mats:

- Use area rugs and mats at entryways to reduce tracked-in dirt and moisture.

### Temperature and Humidity Control:

- Maintain a consistent indoor climate. Fluctuations in temperature and humidity can cause wood to expand or contract, leading to damage.

### Regular Inspection:

- Periodically inspect the flooring for any signs of damage, such as scratches, dents, or loose boards. Address any issues promptly.

### Follow Manufacturer Guidelines:

- Always follow the manufacturer's recommendations and warranty guidelines for cleaning and maintenance.

Remember, while engineered wood flooring is more resilient than solid hardwood, proper care and maintenance will extend its lifespan and keep it looking beautiful for years to come.

## **Lacquer Kit – for use of Lacquered & Fusion Hybrid floors:**

Master Cleaner removes dirt and grime effectively and can be used for regular cleaning. Mix 125 ml Master Cleaner into 5 L warm water, wash the surface and let it dry. When using the Intensive Wood Cleaner and Master Care please follow the work steps.

Always remember to test on a less visible spot to check the compatibility of the surface with the product.

1. Mix 125 ml of Intensive Wood Cleaner with 5 L warm water.
2. Wipe the wood surface with a well-wrung mop. If the surface is very dirty, repeat.
3. Let the surface dry for 2 hours before subsequent treatment.
4. Shake the container well before use.
5. Apply the concentrated care product in a thin and even coat, using a WOCA Wool Pad and WOCA Pad Holder. If the cloth/mop becomes dirty, rinse in clean

water and wring thoroughly. Then continue the application. Do not apply additional Master Care once a surface has begun to dry.

6. Leave the floor to dry for 1-2 hours at 20°C. Drying time will vary by temperature, humidity and application quantity. Lower temperatures and/or higher humidity can extend drying time.
